

JSZM1020 - Trackless

The main material is national quality inspection-exempt products (FENGLV high quality aluminum alloy)—the industrial leading technique of surface crafts and the best thickness, not only make the product good quality, but also keep the product color a long time.

Product structure: Dazhong R-shape folding gate, Dazhong N-shape folding gate, the frame diagonal rod adopts straight rod structure, having good industrial art and steady dimension, which ensure the frame run smoothly and durably. N-shape long diagonal rod trackless Dazhong folding gate adopts long diagonal rod structure. Based on the original, increasing the frame linkage points makes the frame have better compact connection, the gate run in line and durable.

N-shape long diagonal rod trackless Dazhong folding gate color: silver.

Standard functions

1. Control the gate to open, close and stop by wireless remote control.
2. Music prompt function: the frame is running together with music prompt, to warn vehicles and persons.
3. Soft startup function: It can reduce power torque while the motor wink-start, ensuring the frame running smoothly.
4. Infrared anti-collision function: To avoid clipping persons or objects during operation.
5. Time protection function: set the max runtime according to the frame length, to avoid bumping the gate.
6. In-position memory function: control the gate open in position and close in position, to avoid bumping the gate.
7. "Open" priority function.
8. Wind-proof function: ensure the gate can resist strong wind.
9. Manual function: while power off, separate clutch by dedicated key, then the gate can be operated by manual push.
10. Automatic correction function(only trackless gate has the function): orientation correction during the open\close operating, to ensure the accurate operation during open\close.

Optional functions

1. Display function: displaying words and time on 1 or 2 LED displays. The words can be loaded up to 500 bytes.
2. Infrared anti-climbing function: When human or object climb over the top of frame, the control system will send out alarm automatically.
3. Emergency management function: It can be integrated with the fire alarm system and other systems, when receiving an emergency signal, the frame will fully open automatically, and the system will not receive any other instruction signals until emergency signal to be removed.
